

I have been a satellite radio subscriber for roughly a year now and I would like to express my opposition to HR 4026. The key benefit to satellite radio from my perspective is the significantly higher quality of service and the fact that reception or range of service is not limited to your proximity to local radio stations and topography. The attempt to limit the local satellite service content/capability and fundamental rationale for the need for such limitation is unfounded. This is a classic case of lobbyist somehow making an issue out of nothing but their limited best interests. The consumer has the right to a choice on what service he/she is going to use. Please concentrate on issues which really address the needs of the American public. Satellite radio is a fantastic service, local broadcasting is just not meeting my needs.
